

Project:	MEROPE New Mobility and Technological Services for Urban and Metropolitan Areas Logistics and Accessibility
Subject:	The aim of the project is to study and develop evaluation models and telematic tools for logistic and mobility management and control in urban and metropolitan areas, allowing the development and use of innovative information and communication technologies, in support of integrated transport systems creation. Project partnership was created according to the guidelines of the INTERREG III B MEDOCC program: the latter is a Community initiative meant to promote a better territorial integration within the Union as well as to support transnational co-operation among national, regional and local authorities in the Mediterranean area. According to project promoters, the use of new technologies in the field of logistics will enhance economic competitiveness, will improve mobility and the quality of life in urban areas.
